

CRIME INVESTIGATION - INCIDENT AND BACKGROUND REPORT

Case Reference: GOA-2026-DT-0115

Prepared by: Inspector Savio Fernandes, Anti-Narcotics Cell, North Goa

Date: Operation: 14 September 2026 | Report: 16 September 2026

1. Nature of Incident

This case concerns a synthetic drug distribution network supplying MDMA, LSD blotters and cocaine to beach shacks and party venues in North Goa. A tip-off from an informant on 5 September led to a coordinated raid on 14 September 2026 at three locations in Baga, Anjuna and Mapusa.

2. Operation Summary

Officers seized 6 kg of MDMA, 2.2 kg of cocaine and about 3,000 LSD blotters with an estimated street value of Rs. 5.6 crore, along with Rs. 18 lakh in cash. Four people were arrested on the spot. Two persons, including a foreign national believed to be the main supplier, escaped before the raid. One officer's name surfaced in the intelligence, suggesting the network received advance information.

3. Network Structure

The network appears to be run by a local operator known by the alias Padre, who owns several shacks. Supply originates from a foreign supplier and enters through courier buses from Bengaluru and boats from the coast. Payments are routed through UPI and cryptocurrency wallets.

4. Financial Trail

Seven bank accounts have received suspicious cash deposits of about Rs. 92 lakh over 14 months. Cryptocurrency transfers worth about Rs. 60 lakh have been traced to two wallets. A police officer's relative bought an expensive property last year.
